

## West Chatham Roadway Design Project

# OVERNIGHT WORK STARTING APRIL 5, 2021

MassDOT and contractor Lawrence Lynch Corp. will be conducting work on the stamped concrete truck aprons on the roundabouts in the West Chatham Rte. 28 corridor April 5-15, 2021. Some work will be conducted overnight.

Traffic will be open in both directions throughout the duration of this work and access to local businesses will be always maintained. There may be times when one-way alternating traffic is necessary.

In order to avoid detours of truck/trailer traffic, work will be conducted at both Barnhill Road and George Ryder Road roundabouts simultaneously, one half of each roundabout at a time. The contractors plan to allow about 36 hours of cure time between concrete placements.

Police details will be posted (2) each at both locations 24 hours per day to facilitate traffic flow through the roundabouts. Oversized vehicles will be transitioned through the projects with police assistance. Trucks with trailers transiting the corridor may want to seek an alternate route if feasible and avoid the area if they can during the day.

There will be police officers posted at these locations during all construction times. Regular passenger and commercial vehicles will be able to transition the roundabouts with no problems.
